January 2007

## EMR and Practice Management System for Convenient Care Clinics – CC-EMR

**Empower your Convenient Care Clinic staff!  
And Watch your list of Satisfied Customers and Revenues Grow!**

**CC-EMR** is a suite of tools designed, and developed specifically for **Convenient Care Clinics** (also referred as Retail Clinics). Technology can be leveraged to address many of the critical issues in day to day operations of Convenient Care Clinics such as Patient registration, Encounter records, Billing, Claims Filing and Follow up, Accounts Receivable, Prescription Records and Referrals Management as well as Strategic Reporting.

**CC-EMR** suite of tools is fully web based and hence no need to invest in hardware and technology. And no need to make big investment in software too. A simple subscription based service model is the preferred delivery model. And you don't need to commit yourself for long term. If the business requirements increase or change in future, the service offerings will grow to keep up with your requirements. Above all, there is no need for capital investment; only nominal monthly subscription based fees.

Most of the expensive software procured from other parties or developed in-house end up with little or no use to your users. The primary reasons for this are that these software packages are complex, difficult to understand by ordinary users, costly to train the staff and expensive to maintain them. **CC-EMR** eliminates all these issues and your employees would adapt it with ease.

### Who should use **CC-EMR**

- Individual Convenient Care Clinics
- Corporate Chains of Convenient Clinics
- Nor-for-profit Groups running Convenient Care Clinics

### Why use **CC-EMR**

- Fast, reliable, easy process
